# 課題 1

## リスト

```
#include <stdio.h>
#include <stdlib.h>

struct node {
    int data;
    struct node *left;
    struct node *right;
};

struct node *insert_data(int x, struct node *p);
int search_tree(int x, struct node *p);
void print_tree(struct node *p);

int main(int argc, char *argv[])
{
    FILE *fp;
    int i, x;
    struct node *root;

    if (argc != 2) {
        printf("missing file argument\n");
        return 1;
    }

    fp = fopen(argv[1], "r");
    if (fp == NULL) {
        printf("can't open %s\n", argv[1]);
        return 1;
    }

    root = NULL;

    for (i = 0; i < 20; i++) {
        fscanf(fp, "%d", &x);
        root = insert_data(x, root);
    }

    print_tree(root);

    while(1) {
        scanf("%d", &x);
        if (x <= 0)
            break;
        if (search_tree(x, root) == 1)
            printf("%d: Found\n", x);
        else
            printf("%d: Not found\n", x);
    }

    fclose(fp);

    return 0;
}
```

(次ページに続く)

```

struct node *insert_data(int x, struct node *p)
{
    if (p == NULL) {
        p = (struct node *)malloc(sizeof(struct node));
        if (p == NULL) {
            printf("Out of memory\n");
            exit(1);
        }
        p->data = x;
        p->left = NULL;
        p->right = NULL;

        return p;
    }

    if (x == p->data)
        return p;

    if (x < p->data)
        p->left = insert_data(x, p->left);
    else
        p->right = insert_data(x, p->right);

    return p;
}

void print_tree(struct node *p)
{
    if (p == NULL)
        return;

    print_tree(p->left);
    printf("%d\n", p->data);
    print_tree(p->right);
}

int search_tree(int x, struct node *p)
{
    if (p == NULL)
        return 0;

    if (p->data == x)
        return 1;
    else if (p->data > x)
        return search_tree(x, p->left);
    else
        return search_tree(x, p->right);
}

```

## 実行結果

```

cosmos10:6_120213 s1111361$ ./ex6-1 prog2-ex6-data.txt
1
2
3
4
5
6

64: Not found
3
3: Found
-1
cosmos10:6_120213 s1111361$

```

## 課題 2

### リスト

```
#include <stdio.h>
#include <stdlib.h>

struct node {
    int data;
    struct node *left;
    struct node *right;
};

struct node *insert_data(int x, struct node *p);
int sum_tree(struct node *p);

int main(int argc, char *argv[])
{
    FILE *fp;
    int i, x;
    struct node *root;

    if (argc != 2) {
        printf("missing file argument\n");
        return 1;
    }

    fp = fopen(argv[1], "r");
    if (fp == NULL) {
        printf("can't open %s\n", argv[1]);
        return 1;
    }

    root = NULL;

    for (i = 0; i < 20; i++) {
        fscanf(fp, "%d", &x);
        root = insert_data(x, root);
    }

    fclose(fp);

    printf("sum: %d\n", sum_tree(root));

    return 0;
}
```

(次ページに続く)

```

struct node *insert_data(int x, struct node *p)
{
    if (p == NULL) {
        p = (struct node *)malloc(sizeof(struct node));
        if (p == NULL) {
            printf("Out of memory\n");
            exit(1);
        }
        p->data = x;
        p->left = NULL;
        p->right = NULL;

        return p;
    }

    if (x == p->data)
        return p;

    if (x < p->data)
        p->left = insert_data(x, p->left);
    else
        p->right = insert_data(x, p->right);

    return p;
}

int sum_tree(struct node *p)
{
    if (p == NULL)
        return 0;

    return sum_tree(p->left) + p->data + sum_tree(p->right);
}

```

## 実行結果

```

cosmos10:6_120213 s1111361$ ./ex6-2 prog2-ex6-data.txt
sum: 171

```

prog2-ex6-data.txt にある整数から重複した数を除いて合計すると 171 になった。これにより、この結果が正しいことが確認した。
